

RoHS-Declaration of Conformity

The RoHS (Restriction of hazardous substances), EC-Directive 2002/95, came into force on 1st of July 2006 in all EU countries.

The aim of the directive is the banishment of hazardous substances in electronic products. This concerns mainly leaded solder and toxic flame retardants in cables.

Here are the names of the six substances:

lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE).

Although RoHS is an EU-Directive, also those who export devices to countries of the EU are obliged to ensure compliance.

We are communicating closely with our suppliers and have made agreements that they confirm that their products do not contain the above mentioned materials respectively do not exceed limit values.

The prescribed limit values are:

Max: 0,01 weight percent cadmium

Max: 0,1 weight percent each of lead, mercury, hexavalent chromium, PBB and PBDE

According to our current state of knowledge none of the products supplied to you contain hazardous substances in critical concentrations. We strictly observe the Directive of RoHS and comply it.
